Aryan Sahni

(+49) 15511513979 | aryan93sahni@gmail.com | Nürnberg, Germany

Education

Ostbayerische Technische Hochschule Amberg-Weiden — Amberg, Germany
Master of Science (M.Sc.) in Artificial Intelligence for Industrial Applications — *Mar. 2026 – Sept. 2028*

Bharati Vidyapeeth University — Delhi, India
Bachelor of Computer Application — *Sep. 2021 – Jul. 2024*

Experience

Product Operations — Sep. 2024 – Nov. 2025
DotPe — *New Delhi, India*

- Obtained user activity data using SQL and cleaning using Python in order to analyze user adoption, user experience, and retention, resulting in 15% boost in feature usage.
- Automated weekly report on product health to stakeholders by creating Tableau & Power BI dashboards, saving 8 hours of reporting time per week.
- Identified friction points in UX via a blend of quantitative and qualitative data (NPS, support tickets), leading PMs to reconsider their prioritization queue and decrease user complaints by 20% following release.
- Optimization of cross-discipline workflows utilizing Jira and Confluence for ticket intake and bug reporting, reducing the time taken to resolve issues by 30%.

RPA Intern — Jun. 2024 – Sep. 2024
BusyBots — *New Delhi, India*

- Automated repetitive cross-departmental data workflows using PowerApps and Dataverse, reducing manual processing time by 40% and eliminating data entry errors.
- Built role-based data access in Dataverse for multiple user personas, protecting data security and integrity across the automated workflows.

Projects

ATS-Friendly Resume Builder | *Prisma, SQLite, JWT, bcrypt, LocalStorage*

- Developed an ATS-friendly CV generator with 4 customizable templates and real-time preview, using custom print CSS to create 100% pixel-perfect vector A4 PDF exports.
- Implemented secure authentication with JWT, bcrypt hashing (10 salt rounds), and seamless guest-demo access for friction-free onboarding.
- Designed dual-storage persistence using Prisma/SQLite with offline LocalStorage backups and auto cloud sync, ensuring 100% data retention.
- Added JSON import/export workflows for easy data backup, restoration, and cross-device schema migration.

Car Park Traffic & Occupancy Analysis | *Python, Time-Series Analysis, Haversine Formula*

- Aggregated and cleaned 1.2M+ time-series records across 9 car parks into a unified dataset using disk-caching, reducing load times by 65%.
- Engineered a traffic flow algorithm with 10-minute gap masking to analyze hourly inflow/outflow patterns with 92% accuracy.
- Performed rolling 7-day and 30-day minimum baseline analyses to isolate persistent long-term parking demand from short-term retail usage.
- Implemented the Haversine formula to map GPS coordinates across 15+ locations and analyze spatial distance relative to occupancy rates.

Technical Skills

Languages & Web: C, C++, Java, Python, JavaScript, HTML, React Framework, Bootstrap, Tailwind CSS, MS SQL Server
Data Science & ML: Data Structures, ML/DL Libraries (PyTorch, NumPy, Pandas, Scikit-Learn, Matplotlib), Machine Learning, Deep Learning
Data Analytics & Visualization: SQL, NoSQL, Data Visualisation (Tableau), Power Query, Power BI, Data Warehousing, Microsoft Office
DevOps & Tools: Git (Version Control), Docker, Jenkins
Languages: Hindi (Native), English (C1), German (A2)
